DETAILED ACTION

1. This action is response to communications: application, filed on 11/07/2000; amendments filed on 11/14/2008. Claims 1-2, 4-14, 16-18, 20, 22-23, 25, 27-29, 31-33, 35, 37-39, 41-42, 44-49, 51-53 and 55-64 are pending; claims 1, 7-10, 42, 44-49 and 51-52 are amended; claims 3, 15, 17, 19, 21, 24, 26, 30, 34, 36, 40, 43, 54 and 65 are canceled.

2. In response to applicant's amendments in accordance with Examiner's recommendations those were communicated on the Office Actions sent out on 09/11/2007 and 05/15/2008, the claim invention is in condition for allowance.

Reasons for allowance

3. With respect to claims 1, 12-13 and 62. The prior arts of record, singly or in combination fails to teach the features of claim(s) limitations thereof. Specially, inter alia, it fails to teach a method for processing a complex request and to optimize the number of the SNMP requests transmitted through a network, wherein the complex request is addressed to at least one SNMP agent of a resource machine of a computer system from a complex protocol manager of an application machine, the application and resource machines communicating through a network, each agent managing one or more attribute tables belonging to the resource machine, the instances of the tables being referenced by identifiers comprising indexes, the method consisting of: transforming a first filter derived from a complex request from the manager of the application machine into a second simplified filter comprising only conditions on indexes, the second simplified filter corresponding to the following matching characteristics: the second simplified filter lets through all the SNMP requests whose response could verify the first filter based on conditions whose attribute values could verify the first filter, and the second simplified

filter filters out all the SNMP requests whose responses cannot in any way verify the first filter because the conditions on indexes associated with said filtered-out SNMP requests do not verify the first filter regardless of attribute values associated with said conditions; wherein the transforming further comprises deleting from the first filter all conditions that operate on attributes that are not associated with any of said indexes; limiting the SNMP requests to those that comply with the second simplified filter; transmitting said limited SNMP requests to the SNMP agent of the resource machine through the network; and applying the first filter to the responses obtained to the SNMP requests, whereby the method makes possible to process said complex request and to optimize the number of the SNMP requests transmitted through the network.

4. Claims 2, 4-11, 14, 16-18, 20, 22-23, 25, 27-29, 31-33, 35, 37-39, 41-42, 44-49, 51-53 and 55-61, 63-64 further limit the allowed claims, therefore they are also allowed.

Conclusion

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
